Figure 1 displays the current number of rapid flu cases reported to our department and broken down by influenza sub-typing compared to a 4-year historical average (the red line). Forty-five cases of influenza have been reported for week 7.

Figure 2 displays the weekly percentage of Influenza-Like Illness (ILI) as identified by the Essence Syndromic Surveillance System. The blue line shows the percentage of ILI Emergency Department visits in Winnebago County from our two participating hospitals and the red line shows the regional ILI percentage for counties participating in Essence. This graph displays the most current Essence data, which is through CDC Week 8 . ILI for CDC Week 8 for Winnebago County is **1.17%** , compared with regional ILI at **1.16%** .

Figure 3 is the representation of visits from our sentinel sites not participating in Essence for ILI. ILI activity among the three sites that reported for CDC Week 7 was **1.5%**.

Figure 4 compares the current number of pneumonia hospital admissions (red line) against the 4-year historical average (the green line). For CDC Week 7, we have 19 total hospital admittances reported. Note that all data are preliminary and numbers for weeks 5, 6, and 7 are still arriving.
